

KONDAKAMARLA ASHOK

DevOps Engineer

E-mail: kondakamarlaashokramu@gmail.com | Contact: 9000052809 | Location: Bengaluru, India | [Linkedin](#)

PROFESSIONAL SUMMARY

DevOps Engineer with 3.5+ years of experience in designing and implementing CI/CD pipelines, managing cloud infrastructure on AWS, automating deployments, containerization, and infrastructure as code. Proficient in Jenkins, Docker, Kubernetes, Terraform, Ansible, and monitoring tools like Prometheus and Grafana. Strong hands-on experience in automating infrastructure, release management, and supporting production environments in Agile teams.

CORE TECHNICAL SKILLS

Cloud Platform: AWS (EC2, S3, IAM, VPC, Route53, CloudWatch, Auto Scaling, ELB)

CI/CD Tools: Jenkins

Version Control & Build Tools: Git, Maven

Containerization & Orchestration: Docker, Kubernetes

Infrastructure as Code & Configuration Management: Terraform, Ansible

Monitoring Tools: Prometheus, Grafana, CloudWatch

Scripting Languages: Shell Scripting, Python

Project Management Tools: Jira

Operating Systems: Linux, Windows

PROFESSIONAL EXPERIENCE

HCL Technologies – Software Engineer / DevOps Engineer

Nov 2022 – Present | Bengaluru, India

Key Responsibilities & Achievements

- Built and maintained CI/CD pipelines using Jenkins, reducing manual deployment effort by 40% and improving deployment efficiency across DEV, QA, and UAT environments.
 - Automated application deployment workflows across multiple environments including DEV, QA, and UAT.
 - Managed AWS cloud infrastructure including EC2, S3, IAM, VPC, Route53, and CloudWatch services.
 - Automated infrastructure provisioning using Terraform, reducing manual configuration time by 50% and improving deployment consistency.
 - Created and managed Docker images and containers for application deployment and environment consistency.
 - Worked on Kubernetes deployments and services using YAML manifests for containerized applications.
 - Configured and maintained Ansible playbooks for application deployment, package installation, and server configuration.
 - Collaborated with development and QA teams to support production releases and troubleshoot deployment-related issues.
 - Maintained source code repositories and branching strategies using Git for smooth release management.
 - Automated build and deployment processes using Maven and Jenkins integration.
 - Supported production deployments and troubleshooting activities, maintaining high application availability and minimizing deployment downtime.
 - Participated in Agile/Scrum ceremonies and coordinated with cross-functional teams for successful project delivery.
-

PROJECT EXPERIENCE

Client: Avetta

Role: AWS Support Engineer

Environment: AWS, Linux, Windows, Jenkins, Terraform, Docker, Git, CloudWatch

Responsibilities

- Provided L1/L2 application and infrastructure support for AWS-hosted environments across DEV, QA, and UAT.
- Managed and monitored AWS services including EC2, S3, IAM, VPC, Route53, and CloudWatch to ensure system availability.
- Investigated production incidents, performed log analysis and RCA, and resolved issues within SLA timelines.
- Supported application deployments and release activities using Jenkins and assisted with infrastructure provisioning using Terraform.
- Managed IAM access, supported Docker deployments, and coordinated change and support activities with cross-functional teams.

Client: Intel

Role: DevOps Engineer

Environment: AWS, Linux, Git, Jenkins, Ansible, Docker, Kubernetes

Responsibilities

- Created and maintained Jenkins jobs for build and deployment automation.
 - Configured CI/CD pipelines for promoting applications across DEV, QA, STG, and UAT environments.
 - Managed source code repositories, branching, and tagging activities using Git.
 - Worked on AWS services such as EC2, S3, IAM, VPC, Route53, CloudWatch, and Auto Scaling.
 - Provisioned AWS infrastructure resources using Terraform scripts.
 - Created Dockerfiles and managed Docker image creation and container deployments.
 - Worked on Kubernetes deployments and services using YAML configuration files.
 - Utilized Maven for build automation and generation of deployable artifacts.
 - Configured Ansible playbooks for server setup and deployment automation.
 - Supported application deployments on Apache Tomcat servers.
 - Assisted in troubleshooting deployment issues and maintaining deployment stability.
-

KEY ACHIEVEMENTS

- Reduced manual deployment effort by 40% using Jenkins CI/CD automation.
 - Automated AWS infrastructure provisioning using Terraform, reducing setup time by 50%.
 - Implemented monitoring dashboards using Prometheus and Grafana to improve infrastructure visibility.
 - Supported stable production releases with minimal downtime across multiple environments.
 - Improved deployment consistency through Docker-based containerized application deployments.
-

CERTIFICATIONS

- Python for Everybody – University of Michigan
 - Using Python to Access Web Data – University of Michigan
-

SOFT SKILLS

- Problem Solving
 - Troubleshooting
 - Team Collaboration
 - Communication Skills
 - Analytical Thinking
