

KONDAKAMARLA ASHOK

DevOps Engineer

E-mail: kondakamarlaashokramu@gmail.com | Contact: 9000052809 | Location: Bengaluru, India | [Linkedin](#)

PROFESSIONAL SUMMARY

Having **4+ years** of experience in Software, Build and Release Management and extensive experience of being part of many projects with different setups and environments.

- Administration of Version Control Management system **GIT**.
- Experienced with **continuous integration, continuous delivery, continuous deployment** and **continuous monitoring**.
- Experienced in implementing Continuous Integration, orchestrating engines, and configuring **Jenkins setups** with a focus on **master-slave configurations**.
- Involved in creating Jenkins jobs for multiple applications and integrated with different tools as part of Continuous Integration process.
- Experience on Deployment process for servers like **Apache Tomcat application server**.
- Managed the **Dockerization** of applications utilizing **multistage build processes** to optimize efficiency and performance.
- Experience in creating **Dockerfiles** and then building image and deploying it to various environments.
- Designed and implemented **Docker container networks**, further configuring them for new container integration.
- Developed **Kubernetes deployment** manifests for mission-critical applications, ensuring robust and reliable operation.
- Designed and implemented **CI/CD** pipelines using **AWS CodePipeline** for seamless application deployment.
- Utilized **AWS CodeBuild** to build **Docker images** and push them to **Amazon ECR** (Elastic Container Registry).
- Proficient in managing Kubernetes clusters using **AWS EKS**.
- Experience in setting up **EKS clusters**, scaling, and maintaining worker nodes.
- Ensured high availability and **zero-downtime** deployments.
- Proficient in creating **Docker images** for applications.
- Deployed **Docker images to Amazon Elastic Container Registry (ECR)** to streamline container management processes.
- Leveraged **Prometheus** for monitoring and collecting metrics from EKS clusters.
- Set up **Grafana** dashboards to visualize and analyze performance data from Eks cluster.
- Responsible for managing the release documents and co-ordination process with different teams as part of release team.
- Followed best practices to automate the release automation and worked in production releases and coordination with different stakeholders in entire release.
- Experience in writing the **shell scripts** to automate the **deployment process** for multiple environments.
- Excellent communicative, interpersonal, intuitive, analysis and leadership skills with ability to work efficiently in both independent and team work environments.
- Knowledge on **AWS EC2, Route53, S3, ELB, EBS, AMI, VPC, and Service Catalog**.
- Worked in change control board to manage the multiple change request to pass the multiple environments.
- Hands on experience in delivering container based deployments using **Docker**.

- Effectively co-ordinate with various functions development, testing, environment management, helpdesk within the organization throughout the **SDLC**.
 - Employed **Ansible's** powerful automation features to enhance the efficiency of **Continuous Integration and Continuous Deployment (CI/CD) pipelines**.
 - Managed and created **Ansible playbooks to automate build, test, and deployment procedures**, leading to more reliable software releases and improved operational efficiency
 - Utilized **Terraform** in conjunction with version control systems to manage infrastructure changes, ensuring consistency and traceability across environments.
 - Incorporated **Terraform into CI/CD pipelines**, automating infrastructure provisioning and updates, enhancing deployment speed and development efficiency
-

CORE TECHNICAL SKILLS

Cloud Platform: AWS

Version Control Tools: GIT, GIT-Hub, Gitlab

Build Tools: Maven

Continuous Integration Tools: Jenkins, Gitlab CI

Container Tools: Docker

Orchestration Tool: Kubernetes, EKS

Configuration Management Tools: Ansible

Infrastructure as Code: Terraform

Application Monitoring Tools: Prometheus, Grafana

Bug Tracking Tool: Jira

Database: MySQL, RDS

Project Management Tools: Jira

Web Servers/App servers: Tomcat, Apache Web server

Scripting Languages: Shell Scripting, Python

Operating Systems: Linux, Windows

PROFESSIONAL EXPERIENCE

HCL Technologies – Software Engineer / DevOps Engineer

Nov 2022 – Present | Bengaluru, India

Key Responsibilities & Achievements

- Built and maintained CI/CD pipelines using Jenkins, reducing manual deployment effort by 40% and improving deployment efficiency across DEV, QA, and UAT environments.
 - Automated application deployment workflows across multiple environments including DEV, QA, and UAT.
 - Managed AWS cloud infrastructure including EC2, S3, IAM, VPC, Route53, and CloudWatch services.
 - Automated infrastructure provisioning using Terraform, reducing manual configuration time by 50% and improving deployment consistency.
 - Created and managed Docker images and containers for application deployment and environment consistency.
 - Worked on Kubernetes deployments and services using YAML manifests for containerized applications.
 - Configured and maintained Ansible playbooks for application deployment, package installation, and server configuration.
 - Collaborated with development and QA teams to support production releases and troubleshoot deployment-related issues.
 - Maintained source code repositories and branching strategies using Git for smooth release management.
 - Automated build and deployment processes using Maven and Jenkins integration.
 - Supported production deployments and troubleshooting activities, maintaining high application availability and minimizing deployment downtime.
 - Participated in Agile/Scrum ceremonies and coordinated with cross-functional teams for successful project delivery.
-

PROJECT EXPERIENCE

Client: Avetta

Role: DevOps Engineer, Aws Admin

Tools: GIT, EKS, ECS,ECR, Tomcat, Terraform, , Docker

Environment: AWS, Linux, Windows

Role & Responsibilities

- Designed and implemented **CI/CD** pipelines using **AWS CodePipeline** for seamless application deployment.
- Utilized **AWS CodeBuild** to build Docker images and push them to Amazon ECR (Elastic Container Registry).
- Proficient in managing Kubernetes clusters using **AWS EKS**.
- Experience in setting up **EKS clusters**, scaling, and maintaining worker nodes.
- Ensured high availability and **zero-downtime** deployments.
- Proficient in creating Docker images for applications.
- Pushed **Docker images** to **Amazon ECR** for efficient container management.
- Leveraged **Prometheus** for monitoring and collecting metrics from EKS clusters.
- Set up **Grafana** dashboards to visualize and analyze performance data
- Implemented highly available EC2 Instances using **Terraform** and **CloudFormation**, and developed new plugins to enhance **Terraform functionality**.
- Worked in an **IAAS** environment called **Terraform**, to manage application infrastructures such as storage and networking
- Experienced in the atmosphere of cross-functional team within the organization's Agile Project Life-cycle.
- Ensured SaaS solution had at least a 99.98% uptime, trouble shooting complex network, application, and security related issues, and continually enhancing the software life cycle for this SaaS solution.

Client: Intel

Role: DevOps Engineer

Environment: AWS, Linux, Git, Jenkins, Ansible, Docker, Kubernetes

Role & Responsibilities

- Creating branches and tags in **GIT repositories** and provided branches access permission to **Dev team**
- Responsible for **tagging and maintaining code** on version control.
- Creating the **Build & Deployment** plans in Jenkins as per the project requirement.
- Configuring Jenkins as a common CI engine to build and promote applications to DEV, **QA, STG and UAT** environments
- Experience in working on AWS and its services like **IAM, VPC, EC2, EBS, S3, ELB, Auto Scaling, Route 53, CloudWatch, SNS**, create custom sized VPC, subnets, NAT, and Security groups.
- Designed **highly available**, cost effective and **fault tolerant** systems using multiple EC2 instances, Auto Scaling, Elastic Load Balancer and AMIs.
- Configured **S3 buckets** with various life cycle policies to archive the infrequently accessed data to Storage classes based on requirement
- Used Amazon **RDS** to create snapshot and automate backup of database
- Good Hands-on experience in creating **Jenkins jobs, plug-in installations**, setting up distributed builds using **master/slave concepts**.
- Automated deployment of builds to different environments using Jenkins.
- Experienced in using Build Automation scripting like Maven as build tools for building of deployable artifacts (**JAR, WAR**) from source code.
- Worked on Provisioning of **AWS instances using Terraform** .
- Experience in using **Tomcat and Apache web servers** for deployments.
- Experience in **Docker like creating Docker images, containers, Docker files, tagging and publishing to Docker Hub**.
- Writing Dockerfile to create customized docker images
- Setting up Kubernetes using EKS.
- Writing manifest files to create deployments and services for micro service applications.

KEY ACHIEVEMENTS

- Reduced manual deployment effort by 40% using Jenkins CI/CD automation.
- Automated AWS infrastructure provisioning using Terraform, reducing setup time by 50%.
- Implemented monitoring dashboards using Prometheus and Grafana to improve infrastructure visibility.

- Supported stable production releases with minimal downtime across multiple environments.
 - Improved deployment consistency through Docker-based containerized application deployments.
-

CERTIFICATIONS

- Python for Everybody – University of Michigan
 - Using Python to Access Web Data – University of Michigan
-

SOFT SKILLS

- Problem Solving
 - Troubleshooting
 - Team Collaboration
 - Communication Skills
 - Analytical Thinking
-

LANGUAGES

- English
 - Telugu
 - Hindi
